(P7.2) $P_{r}=30, T_{r}=15$
(a) Use virial equation of state.
$Z=1+\left(B^{0}+\omega B^{1}\right) P_{r} / T_{r}$

$$
\begin{equation*}
B^{0}=0.083-\frac{0.422}{T_{r}^{1.6}} \tag{Eqn. 7.6}
\end{equation*}
$$

Where,

$$
B^{1}=0.139-\frac{0.172}{T_{r}^{4.2}}
$$

$\Rightarrow B^{0}=0.077459277$
$\& B^{1}=0.138998$
$\& \omega=-0.041$ (book)
$\Rightarrow Z=1+(0.077459277-0.041 * 0.138998) * \frac{30}{15}=1.14$
(b) $\rho=$ ??
$T=T_{r} * T_{C}=15 * 44.4=666 \mathrm{~K}$
$P=P_{r} * P_{C}=2.653 * 30=79.59 \mathrm{MPa}$
$Z=\frac{P V}{R T}, \Rightarrow V=\frac{Z * R * T}{P * M W}=\frac{1.14 * 8.314 * 666}{79.59 * 20.179}=3.93 \mathrm{~cm}^{3} / \mathrm{g}$
$\Rightarrow \rho=\frac{1}{V}=\frac{1}{3.93}=0.254 \mathrm{~g} / \mathrm{cm}^{3}$
(P7.4)
$T_{1}=111 K$
$P_{1}=1 a t m \approx 0.1 M P a$
$T_{2}=77^{\circ} \mathrm{F}=25^{\circ} \mathrm{C}=298.15 \mathrm{~K}$
Use PREOS.XLS, $\Rightarrow$

Use Solver, and set target cell on the volume and make it equal to 33.639114*2 = 67.278228,

Then by changing the cell of pressure, making sure that $\mathrm{T}_{2}=298.15 \mathrm{~K}$

| Current State |  | Roots |  |
| :--- | ---: | ---: | :---: |
| $\mathrm{T}(\mathrm{K})$ | 298.15 | $Z$ | $V$ |
| $\mathrm{P}(\mathrm{MPa})$ | 33.839895 |  | $\mathrm{~cm}^{3} / \mathrm{gmol}$ |

Chapter 7 Practice Problems

| answers for three <br> root region | \#NUM! <br> \#NUM! <br> \#NUM! | \#NUM! <br> \#NUM! <br> \#NUM! |
| :--- | :--- | :--- |
| \& for 1 root region | 0.9184568 | $\mathbf{6 7 . 2 7 8 2 2 8}$ |

$\Rightarrow P_{2}=33.84 M P a$
(P7.5) if the pressure change, implies the volume will change, but we have to keep in mind that the number of moles stay the same.
So, by using PREOS.XLS for $20^{\circ} \mathrm{C} \& 1$ bar $\Rightarrow V=24302.829 \mathrm{~cm}^{3} / \mathrm{gmol}$

| Current State |  | Roots |  |
| :---: | :---: | :---: | :---: |
| T (K) | 293.15 | Z | V |
| P (MPa) | 0.1 |  | $\mathrm{cm}^{3} / \mathrm{gmol}$ |
|  | answers for three root region | \#NUM! | \#NUM! |
|  |  | \#NUM! | \#NUM! |
|  |  | \#NUM! | \#NUM! |
|  | \& for 1 root region | 0.9976523 | 24302.829 |

$\Rightarrow V=0.0243 \mathrm{~m}^{3} / 1 \mathrm{~mole}$
$\therefore \underline{V}=4 m^{3} \Rightarrow n=\frac{4 m^{3}}{0.0243 \mathrm{~m}^{3} / \mathrm{mole}}=164.61 \mathrm{moles}$
For $\mathrm{T}=293.15 \mathrm{~K}$ and $\mathrm{P}=200$ bars $\Rightarrow V=9.68 E-5 \mathrm{~m}^{3} /$ mole

$\Rightarrow \underline{V}=n * V=164.61$ moles $* 9.68 E-5 m^{3} /$ mole $=0.01593 m^{3}$
$\Rightarrow \underline{V}=15.93 L$
(P7.6)

| Current State |  | Roots |  |  |
| :--- | ---: | :--- | :---: | :---: |
| $\mathrm{T}(\mathrm{K})$ | 311.15 | Z | V | fugacity |
| $\mathrm{P}(\mathrm{MPa})$ | 10 |  | $\mathrm{~cm}^{3} / \mathrm{gmol}$ | MPa |
| answers for three |  | \#NUM! | \#NUM! | \#NUM! |

## Chapter 7 Practice Problems

| root region | \#NUM! <br> \#NUM! | \#NUM! <br> \#NUM! | \#NUM! |
| :---: | :---: | :---: | :---: |
| \& for 1 root region | 0.282507981 | 73.08617 | 5.546459 |

$$
\begin{aligned}
& V=73.1 E-6 \mathrm{~m}^{3} / \mathrm{mole} \\
& \Rightarrow n=\frac{0.15 \mathrm{~m}^{3}}{73.1 E-6 \mathrm{~m}^{3} / \mathrm{mole}}=2051.98 \mathrm{moles}
\end{aligned}
$$

The molar volume will stay constant as the gas is cooled. Some checking shows that at 273.15 the saturated liquid volume is $48.2 \mathrm{~cm} 3 / \mathrm{mol}$, thus the system is 2 phase. The shortcut equation can be used to estimate the vapor pressure, but the EOS needs to be used to calculate the molar volumes. Using goal seek...

| Current State | Roots |  |
| :--- | ---: | ---: |
| $\mathrm{T}(\mathrm{K}) \quad 273.15$ | Z | V |
| P |  |  |
| $(\mathrm{MPa})$ | 3.465769 |  |
| $\mathrm{~cm}^{3} / \mathrm{gmol}$ |  |  |
| answers for three |  | 0.69011426 |
| root region | 0.195655461 | 128.2278 |
|  | 0.073553994 | 48.1995 |

The container must be filled with compressed liquid at this temperature to reach 10 MPa .

| Current State |  | Roots |  |
| :--- | ---: | :--- | :---: |
| $\mathrm{T}(\mathrm{K})$ | 273.15 | Z | V |
| $\mathrm{P}(\mathrm{MPa})$ | 10 |  | $\mathrm{~cm}^{3} / \mathrm{gmol}$ |
| \& for 1 root region |  | 0.196286053 | 44.57849 |

Now, the molar volume stays constant when the vessel is heated. Use solver to find the pressure that gives the same molar volume.

| Current State | Roots |  |  |
| :---: | :---: | :---: | :---: |
| $\begin{array}{ll}\text { T (K) } & 311.15\end{array}$ | Z | V | fugacity |
| $\mathrm{P}(\mathrm{MPa}) 34.02393$ |  | $\mathrm{cm}^{3} / \mathrm{gmol}$ | MPa |
| \& for 1 root region | 0.599451881 | 45.58 | 9.053131 |
